JOSÉ HORACIO AHUACTZIN GARCÍA

Puebla, Mexico · LinkedIn · GitHub · Portfolio · jhoracio19@hotmail.com

SUMMARY

Information Technology Engineering student at BUAP, graduating in 2027, with hands-on experience building full-stack and cloud applications using Python, JavaScript, TypeScript, React, Next.js, FastAPI, and Django. Experienced in REST APIs, relational and NoSQL databases, cloud services, application security, and agentic AI systems. Hackathon award winner with experience delivering technical solutions in fast-paced, collaborative environments

PROFESSIONAL EXPERIENCE

Socialler — Frontend Developer | *Remote* | *Apr 2026 – Present*

- Built a production web platform from the ground up using **Next.js 14, TypeScript, Server Actions, Zustand, React Query, and Zod**.
- Reduced the application bundle size by approximately **600 KB** through Three.js lazy loading and dependency optimization.
- Implemented application security controls including **CSP, HSTS, XSS mitigation, and path traversal protection** for AWS S3 integrations.
- Developed complex authentication and registration workflows using **React Hook Form and Zod**.

SELECTED PROJECTS

Industry Hack Tec — 3rd Place, 25 Teams | *ITESM / ASQ / IISE* | *Puebla, Mexico* | *Aug 2026*

- Won **3rd place among 25 teams** by developing a technology and operational solution for a reusable-packaging challenge under a **€100M investment budget**.
- Developed a **quantitative model** for packaging circulation, cost-per-trip, environmental break-even, and sensitivity analysis, projecting **€6.3M in annual savings and 56% lower CO_2 emissions per trip** at 40% conversion.
- Built an **offline-first PWA in under 30 hours** using Next.js, Expo, and TypeScript, delivering **26 screens across 4 user roles** for asset tracking, logistics, retailer operations, and consumer rewards.

ClientOps — AI-Powered Client Operations Platform

AllThingsAgentic Hackathon | Sep 2026

- Built an **AI-powered client operations platform** using **Python, FastAPI, Gemini, and Google Cloud**, combining CRM and project-management workflows with autonomous AI agents.
- Designed an **agentic architecture** using Google GenAI SDK/ADK and **Firestore**, implementing persistent project memory, agent registry, and AI-assisted analysis of client requirements.
- Deployed the asynchronous backend on **Google Cloud Run** with Pydantic V2 for strict data validation and **Cloud Logging/OpenTelemetry** for agent observability and tracing.
-

Cafeztin — AI-Powered Marketplace | *Por Amor a Puebla Hackathon* | *Puebla, Mexico* | *May 2026*

- Built an **AI-powered WhatsApp assistant and marketplace prototype** using Gemini 2.5 Vision for a use case targeting approximately **40,000 coffee-farming families** in Sierra Norte de Puebla.
- Delivered a functional prototype in **36 hours**, integrating conversational AI and image understanding into a real-world agricultural use case.

EDUCATION

Benemérita Universidad Autónoma de Puebla (BUAP) | *Puebla, Mexico*
Information Technology Engineering | *Excepted Program Completion: Aug 2027*

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, SQL, PHP, HTML/CSS
Frameworks & Libraries: FastAPI**,** React, Next.js, Angular, Django, Pydantic, Tailwind CSS, Bootstrap
Cloud & Tools: Google Cloud Plataform, Cloud Run, Firestore, REST APIs, Git, GitHub, Docker, AWS S3, Linux/Unix
AI: Gemini API, Google GenAI SDK/ADK, Agentic AI Workflows, AI-Assisted Software Development
Languages: Spanish (Native), English (Intermediate)
